

F-22 Lightning II® QuickStart

Windows® 95 Installation

Before you begin installing the game, close all programs that your computer may be currently running. The installation program requires all your computer's resources. Then:

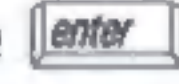

- 1) Place the game CD into your CD ROM drive and close the drive door. The *AutoRun* program will now take over.

Windows® 3.1/ DOS Installation

NOTE: If your computer is running Windows® 3.1, exit Windows® and install the program under DOS using the following Installation and Setup instructions. To exit Windows® 3.1, go to your **Program Manager** window. Select the **Exit Windows** option from the File menu dialogue box or exit Windows® 3.1 by pressing the  +  keys.

- 1) Place the F-22 CD into your CD ROM drive. Assuming that your CD ROM drive is your D drive;
- 2) At the C:> prompt, type: D: <press the  key>.
- 3) At the D:> prompt, type: install <press the  key>.
- 4) The game should now begin installing itself on your hard drive. Refer to the section entitled **Installing F-22 Game files** to continue.

Installing F-22 Game Files

Use the   arrow keys on your keyboard to make a menu selection then press the  key. As an alternative selection means, you may simply press the highlighted (colored) letter of your menu choice. Press the  key to back up to a previous screen. Press the  and  keys to exit the installation routine at any time.

- 1) Select a destination folder where you want the F-22 game files placed. A default destination (C:\F22) is typed in the window for you. Press the  key to select the default destination.
- 2) Select one of three levels of installation: Small Installation, Large Installation, or MultiPlayer Station. Choose Small to conserve space on your hard drive or Large to maximize game speed. The MultiPlayer station level should be selected if you intend on participating in multiplayer games and will not have access to the original CD. A progress meter now displays the percentage of installation completed as the files are copied to your hard drive.

The preferred level of installation is Large. This maximizes the amount of game files copied to your hard drive and allows the game to run at its maximum speed.

- 3) For Windows® 95 users, a program called makeicon.exe is executed part of the installation procedure. This program automatically adds a NovaLogic folder to your Windows® 95 Start Menu under the Programs heading. A sub-folder contains two application short-cut icons; F-22 Lightning II and Set-up. The F-22 Lightning II short-cut icon allows you to launch the game directly from your desktop.
- 4) When all the necessary F-22 game files have been copied, the installation program automatically runs the Setup program.

*Complete manual on-line. Please see **Readme** file for more information.*
